

Here are 3 short business insights:

1. Most popular course: Python with AI/ML has the most students (102) and also brings in the most revenue.
2. Attendance vs. scores: Students with better attendance tend to score higher on finals, but assignment scores predict final scores even more strongly so assignments matter more than attendance alone.
3. Low certification rate: Only 39% of students (194 out of 500) actually earned a certificate, meaning most students aren't completing the course fully.
